

Project Initialization and Planning Phase

Date	29 June 2026
Team ID	xxxxxxx
Project Title	AI Debt Relief Platform
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report :

The proposed AI Debt Relief Platform aims to help individuals manage their debt effectively through artificial intelligence. The platform analyzes users' financial information, evaluates their debt situation, and provides personalized repayment strategies and financial recommendations. By automating debt analysis, the platform enables users to make informed financial decisions quickly and confidently.

Project Overview	
Objective	The primary objective is to develop an AI-powered web application that analyzes users' financial data and provides personalized debt management strategies, financial health insights, and repayment recommendations to improve financial stability.
Scope	The project focuses on collecting users' financial information, analyzing debt using AI, calculating financial health indicators, and generating customized repayment plans through an interactive web application.
Problem Statement	

Description	Many individuals struggle to manage multiple debts and lack access to affordable, personalized financial guidance. Existing financial tools often provide generic advice that does not consider the user's complete financial situation.
Impact	Addressing this problem will help users better understand their financial health, reduce debt effectively, improve financial planning, and make informed repayment decisions, ultimately leading to greater financial stability.
Proposed Solution	
Approach	The platform collects financial information such as income, expenses, outstanding debts, and interest rates. An AI model analyzes this data to assess debt burden, estimate financial health, and generate personalized repayment strategies and recommendations
Key Features	• AI-powered debt analysis. • Personalized debt repayment recommendations. • Financial health assessment and debt score. • Interactive dashboard displaying financial insights. • Secure processing of user financial information. • Responsive web application accessible on desktop and mobile devices

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU	Multi-core Processor
Memory	RAM	8 GB or higher
Storage	Disk space	256 GB SSD or higher

Software		
Frameworks	Frontend & Backend	React.js, Node.js, Express.js

Resource Requirements

Libraries	Additional libraries	Tailwind CSS, Axios, OpenAI SDK
Development Environment	IDE	Visual Studio Code
Data		
Data	User financial information (Income, Expenses, Debts, Interest Rates)	JSON format (entered through the web application)
