

## Solution Requirements

|                      |                         |
|----------------------|-------------------------|
| <b>Date</b>          | 28 June 2026            |
| <b>Team ID</b>       | XXXXXX                  |
| <b>Project Name</b>  | AI debt relief platform |
| <b>Maximum Marks</b> | 4 Marks                 |

### Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

### Step 1: Functional Requirements (FR)

| S.No | Requirement Category | Requirement Description                                                                                 | Priority (High/Medium/Low) |
|------|----------------------|---------------------------------------------------------------------------------------------------------|----------------------------|
| 1    | Authentication       | No user authentication is required. Users can access the platform directly without creating an account. | Low                        |
| 2    | Authorization levels | Single user role (General User). All users have access to the same features.                            | Low                        |

|          |                                   |                                                                                                                                                                                                  |        |
|----------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| <b>3</b> | External interfaces               | Integrates with an AI API to analyze financial information and generate personalized debt relief recommendations.                                                                                | High   |
| <b>4</b> | Transactions processing           | Accepts financial details from the user, processes the data using AI, and returns personalized debt analysis and repayment recommendations. No financial transactions or payments are processed. | High   |
| <b>5</b> | Reporting                         | Generates a financial health report including debt score, repayment strategy, financial insights, and recommendations.                                                                           | High   |
| <b>6</b> | Business rules, etc.              | Validate user inputs before analysis. Calculate debt metrics based on income, expenses, loans, and interest rates. Generate recommendations according to the user's financial condition.         | High   |
| <b>7</b> | Compliance to laws or regulations | User financial information should be handled securely and follow general data privacy practices                                                                                                  | Medium |
| <b>8</b> | <i>Other</i>                      | Allow users to perform multiple analyses without refreshing the application.                                                                                                                     | Medium |

## Step 2: Non-Functional Requirements (NFR)

| S.No | NFR Category               | Requirement Description                                                              | Target Metric / Acceptance Criteria                             |
|------|----------------------------|--------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 1    | Performance & Speed        | Analyse financial information and display results quickly.                           | Results generated within <b>5 seconds</b>                       |
| 2    | Scalability                | Support multiple users simultaneously without affecting performance.                 | Supports <b>1,000+ concurrent users</b>                         |
| 3    | Security & Data Privacy    | Protect user financial data during processing using secure communication.            | <b>HTTPS encryption</b> and secure API communication            |
| 4    | Reliability & Availability | The platform should be available whenever users access it.                           | 99.9% uptime                                                    |
| 5    | Usability & Accessibility  | Provide an intuitive, responsive interface that works on desktop and mobile devices. | Responsive design with simple navigation                        |
| 6    | <i>Other</i>               | Maintainability                                                                      | Modular codebase for easy updates and future feature additions. |
