

Solution Requirements

Date	XXXXXXX
Team ID	XXXXXX
Project Name	AI Debt Relief Platform
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	No user authentication is required. Users can access the platform directly without creating an account.	Low
2	Authorization levels	Single user role (General User). All users have access to the same features.	Low

3	External interfaces	Integrates with an AI API to analyze financial information and generate personalized debt relief recommendations.	High
4	Transactions processing	Accepts financial details from the user, processes the data using AI, and returns personalized debt analysis and repayment recommendations. No financial transactions or payments are processed.	High
5	Reporting	Generates a financial health report including debt score, repayment strategy, financial insights, and recommendations.	High
6	Business rules, etc.	Validate user inputs before analysis. Calculate debt metrics based on income, expenses, loans, and interest rates. Generate recommendations according to the user's financial condition.	High
7	Compliance to laws or regulations	User financial information should be handled securely and follow general data privacy practices	Medium
8	<i>Other</i>	Allow users to perform multiple analyses without refreshing the application.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Analyze financial information and display results quickly.	Results generated within 5 seconds
2	Scalability	Support multiple users simultaneously without affecting performance.	Supports 1,000+ concurrent users
3	Security & Data Privacy	Protect user financial data during processing using secure communication.	HTTPS encryption and secure API communication
4	Reliability & Availability	The platform should be available whenever users access it.	99.9% uptime
5	Usability & Accessibility	Provide an intuitive, responsive interface that works on desktop and mobile devices.	Responsive design with simple navigation
6	<i>Other</i>	Maintainability	Modular codebase for easy updates and future feature additions.
