

Technology Stack

Date	XXXXXX
Team ID	XXXXXX
Project Name	AI Debt Relief Platform
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	React.js, HTML5, CSS3, JavaScript, Tailwind CSS	React provides a fast, component-based UI. Tailwind CSS enables responsive and modern interface design with reusable utility classes.

2	Backend / Server-Side	Node.js with Express.js	Handles API requests efficiently, processes user financial data, and communicates with the AI service.
3	Database / Data Storage	MongoDB	MongoDB stores user financial information and analysis history using a flexible document-based structure.
4	Cloud / Hosting / Deployment	Vercel	Provides simple deployment, automatic builds from GitHub, HTTPS support, and fast global content delivery.

5	Version Control & CI/CD	GitHub	Enables version control, collaboration among team members, and seamless deployment integration with Vercel.
6	Third-Party APIs / Other Tools	OpenAI API (or the AI API you used)	Generates AI-powered debt analysis, financial insights, debt scores, and personalized repayment recommendations based on the user's financial information.
